

TFW-4 Phase D — Browser Fallback Evidence

Run date: 2026-08-27

Browser: Chrome; one temporary tab reused sequentially.

Scope: identity fallback only for scripted contact-shell results.

Accepted evidence boundary: target-specific Telegram preview only. A generic contact shell is retained as a negative observation and cannot verify identity, type, count, replacement, or death.

Handles checked: @mobile_developers_kz and @kzqacommunity.

Privacy: no credentials, cookies, tokens, contacts, session material, or unrelated tabs were inspected or captured.

@mobile_developers_kz

Requested handle: @mobile_developers_kz

Declared type: groups

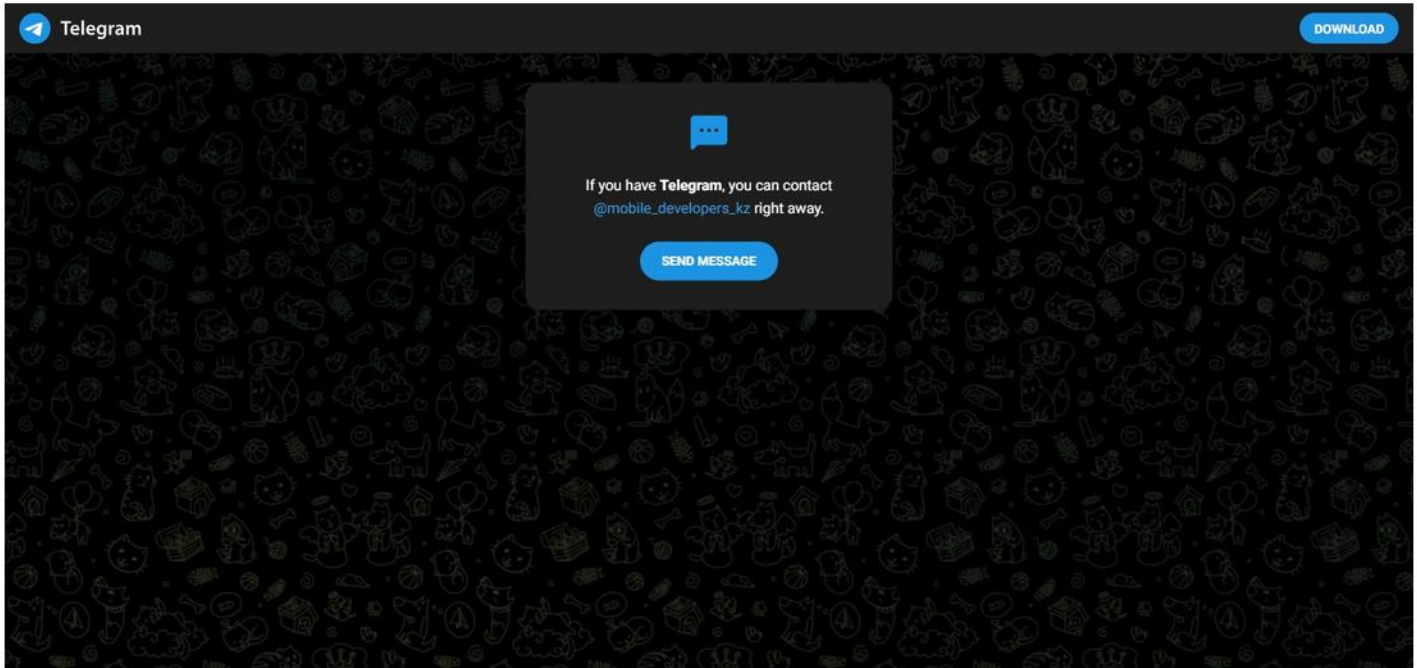

Visible page title: Telegram: Contact @mobile_developers_kz

Observed type: not established

Observed count: explicit no-count

Browser classification: generic contact shell; not target identity evidence

Proposed disposition: unresolved; no catalog mutation and no archive proof.

@kzqacommunity

Requested handle: @kzqacommunity

Declared type: groups

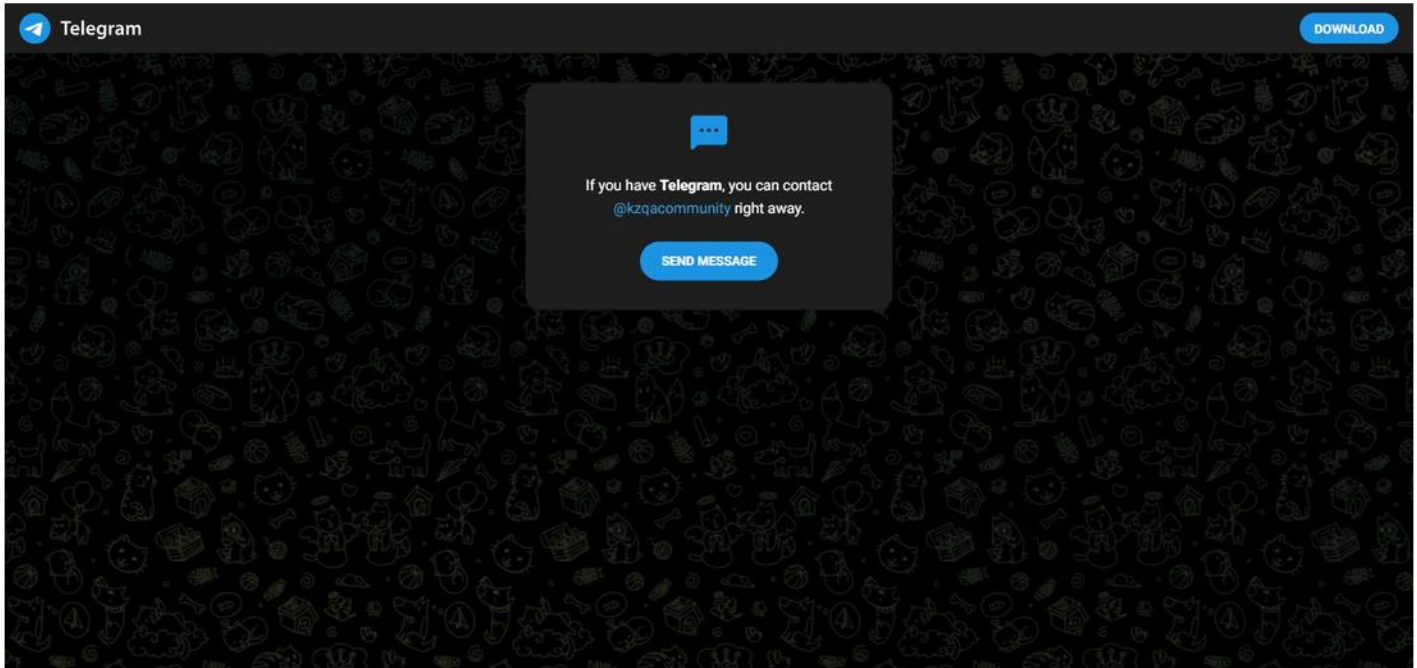

Visible page title: Telegram: Contact @kzqacommunity

Observed type: not established

Observed count: explicit no-count

Browser classification: generic contact shell; not target identity evidence

Proposed disposition: unresolved; no catalog mutation and no archive proof.

Temporary Tab Cleanup

Temporary Chrome tab id: 1400928707

The same tab was used for both target URLs.

Close result: true

Temporary tabs remaining after close: 0

No unrelated Chrome tabs were opened, shown, claimed, or captured.

The browser observations above are supplemental evidence and were not synthesized into validator JSON.
